Index to Volume 1 (1974-1975)
of the
Bulletin of the American Society for Information Science

The Index to Volume 1 of the *Bulletin* was prepared in less than two weeks as an extracurricular activity by members of the University of Michigan Student Chapter of ASIS under the direction of Professor Charles H. Davis, Chapter Advisor. A combination of automated and manual procedures was used. Keywords were "flagged" from titles and captions where possible, but most terms were added for enrichment using the *Cumulative Index to the Annual Review of Information Science and Technology, Volumes 1-7* (1972)as a general guide. Work was done from galley and page proofs for some of the later issues.

The computer program was adapted from a program originally designed for keyword indexing of newspapers, where headlines are seldom adequate for indexing purposes (1). Modifications were made so that authors' names could be processed as well as keywords or subjects. The program used as a prototype is described in the text for the data-processing course taught at the University of Michigan School of Library Science (2).

The depth of indexing is commensurate with space limitations and time constraints. It is our hope that the index will be useful to readers until such time as more careful indexing can be done.

Carolyn Gryczkowski
Helen Reed
David Van Dyk
